

## **Test Plan for Yalla Kora**

❖ In order to make a test plan with a good coverage for the application Yalla Kora we will go through the following procedures which will be prioritized according to their possible business impact:

### **1. Functional Testing:**

- Validate that the application works as per as requirement such as (Selecting favorite teams, Tournaments, matches).
- Validate that the page scrolling and navigation works.
- Validate that the application sends notifications on mobile while the app is not working.
- Validate that the user receives proper error message for connection failure.
- Check the application UI.

### **2. Performance Testing:**

- Test the application performance under different load conditions.
- Test the performance while using different features of the application.

### **3. Usability Testing:**

- Test all the buttons functionalities and sizes.
- Test the clearance and friendly usage of the features.

### **4. Compatibility Testing:**

- Test the application compatibility with different softwares (Android, Ios).
